RE: ORDER REQUIRING MEASURING DEVICES FOR TWO DIVERSIONS ON BEAR RIVER

=====

Pete Peterson, District 11 watermaster, called our office on Friday, April 24 and asked if the Department could issue an order requiring measuring devices for two diversions on the Bear River near the Pegram area. The diversions have controlling works but no measuring devices. Pete says there is just one owner of all the rights on both the diversions in question, the Sorensen and Lloyd Ditches. The owner is a fairly new owner who Pete feels is not very cooperative. Pete explained that he had asked the owner, Tracey Baxter, to install measuring devices before the 1992 season last fall and again early this spring. The devices have not yet been installed.

Pursuant to the watermaster's request which I believe is reasonable and justified, I have drafted an order requiring measuring devices and controlling works for the two diversions in question. The draft order is a revision of our standard order.

*Note: complaint data omitted since I am not certain
when order will be signed.*
